

The human centric system

[Assem Hijazi – Experience, Knowledge & Ideas](#)

May 8, 2024

1. Human-Centric Approach:

- The Digital Human System prioritizes human needs and benefits, shaping its features, structure, architecture, and functions to create a better digital ecosystem for humanity.
- At its core, the Digital Human System is designed to provide the best possible digital ecosystem for humans.

2. Human-Centered System Core:

- The Digital Human System provides standalone and decentralized accounts for each individual.
- Its architecture and structure are built around dedicated and centralized accounts for every human.

3. Serving Humanity:

- The primary goal of the Digital Human System is to serve humanity and develop a superior digital ecosystem.
- It is not targeted towards any specific country, nation, community, religion, or other such distinctions.
- The Digital Human System is inclusive, targeting all people, countries, and humans.

4. Comprehensive Coverage of Human Life Areas:

- The Digital Human System encompasses all aspects of human life.
- It provides apps, solutions, and services tailored to each aspect of human life.

5. Providing Architectural Design and Framework:

- The Digital Human System offers the architectural design and framework necessary to develop a human-centric system for each country.

6. The Apps-Chain System:

- The Digital Human System introduces the Apps-Chain System to serve humans and provide the required architecture and structure for the Digital Human System.
- This system is designed based on the needs of the Digital Human System and provides technological support to create a human-centric system.

7. Not Revenue-Driven system:

- The Digital Human System is created with a focus on humans rather than revenue.
- All features, functions, and ideas are developed to enhance the human-centric system.
- Monetization of the system comes after building the system architecture and design.

8. Support for Service Providers:

- The Digital Human System supports service providers in delivering products, services, apps, and solutions for humans.
- It offers tailored support for service providers corresponding to each aspect of human life.

9. Building Extensive Ecosystems in Each Country:

- The Digital Human System creates a digital ecosystem in each country.
- It targets each aspect of human life and provides vertical focus on each aspect individually.

10. Local Country Management:

- The Digital Human System is primarily managed by local country entities.
- It engages with key partners and official entities of each country.
- It targets official entities, smart governments, public sectors, and others based on each aspect of human life.

11. Protecting Human Privacy:

- The Digital Human System is the only system on Earth that ensures complete protection of human data and information.
- It provides dedicated, decentralized storage for every human in each country.

- Protecting people's data and information is the primary goal of governments worldwide.

12. Embracing the Social Media Era:

- The Digital Human System is built upon the foundations of the social media era.
- It promotes social networking features and support across all aspects of human life.
