

Technology Chessboard

[Assem Hijazi – Experience, Knowledge & Ideas](#)

June 16, 2020

Chessboard. What you have in chess are 64 squares , 6 type of pieces , 16 pieces , different and limited moves to win a game!!!. Strategy for tactics is the most important factor for winning. If we change the chessboard to 10 * 10 or more and change the pieces to different types and different movement like from elephant to tiger , what has been changed!! ?

King Centric game. All the game is to protect the king , with whatever strategy and tactics you need to make sure the king is protected with every single step you do.

Humanity. let's replace the chess pieces with latest trends of technologies like LM , AI , blockchain , IOT , Robotics , AR and etc. Every technology is like chess pieces they have their limitation and capabilities. Now those technologies supposed to protect the king , who is your KING here ? it is humanity

Serving humanities. Technologies with their capabilities and benefits must serve humanities. Digital transformation and related technologies must act as tools to enhance humanities life experience in all areas they touch and cover.

Strategy is the KING. Mixing digital and physical through real deep study on human interaction with technologies is a must. Make sure you implement the right strategy and tactics using technology chessboard.
